

End View of Guardrail Block

The knob on the top of the fence block actually represents 2 circle knobs 10 3/8" in diameter at the base of the circle and positioned so that the center point of each knob is 24" apart from each other. See Top Down View for spacing details. Also, a smaller ribbed hole (5" in diameter) will be cast in the center of the knob to allow for vertical reinforcement of the wall.

This "groove" runs the entire length of the block. However, the Base Fence Block of a freestanding wall (not transitioning from a retaining wall) should not have the "groove" in it. Rather, it should have a smooth bottom surface.
