ReCon Block Catalog

ReCon blocks are available in a wide variety of shapes and types. Each of the block types have been designed to enhance the aesthetic appearance of a finished retaining wall. In addition, the large selection of shapes and types provides ease and simplicity in the installation process without adding undue complexity for designers, installers or manufacturers.

ReCon offers four distinct types of blocks that are intended to meet any requirement that a project may have. These block types include:

- Retaining Wall Blocks
- Top of Wall Blocks
- Fence Blocks (freestanding)
- Column Blocks

The blocks shown within our block catalog are representative of the most common ReCon block shapes. Actual block shapes and texture options can vary by region so it is best to check with your local supplier to determine availability.

Because ReCon blocks are produced using wet-cast concrete, they lend themselves to a varying degree of customization. Many existing shapes and face textures that we offer today were originally developed to accommodate the needs of an owner, designer or installer. If your project requires a unique shape or texture, it may be possible to develop products not already available. Given a reasonable amount of time, ReCon producers should be able to determine the viability and cost estimate of such a request.
## Retaining Wall Blocks

### Base Block
